

UNIVERSITY

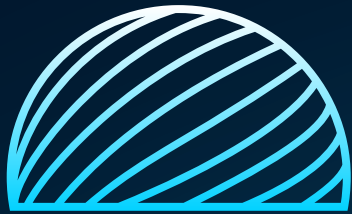

by GOUPIL 

Univrsty offers a virtual environment aimed at enhancing learning through an immersion between theory and practice.

It provides the freedom to explore and master a pedagogical scenario away from the risks involved in real-life conditions.

Training • Extended Reality • Immersion

UNIVRSITY

Its goal is to gradually provide learners with a concrete experience, thus developing their self-confidence and autonomy.

Through systems comprising different levels of interfaces and enriched with relevant user feedback, progress becomes quantifiable, making training more efficient.

Accessible in XR or on a computer, Univrsity allows for multiple learning sessions without increasing the cost.

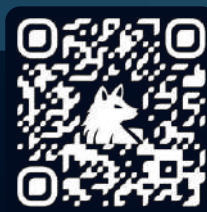

Share it with your colleagues for both training and skill development purposes.
